

New Rhodesia

A little poem

Long-tossed by change's tempests, we,
The children of Europa old,
Set sail to once again be free;
And we freedom we found on shores of gold.

Our feet were tired from constant flight,
Our hands outstretched in supplication;
"Save us from the coming night!"
We cried as we strove for our Nation

We yearn to be once more proud and free.

-Anon

About New Rhodesia

New Rhodesia is going to become more than just a new nation, New Rhodesia is going to be the new hope for a society that actually works for us all.

New Rhodesia will be a state with real diversity, where blacks lives among blacks and whites among whites.

New Rhodesia will not fight wars for oil or greed, and we will only participate in battles if our sovereignty is under threat.

We will work and fight together for a new state, and we will be ready to lift the heaviest burdens for the final victory.

We will harden the young, and raise awareness to our future and past.

We will be hard, but never unjust.

We will create a homeland for Europeans, in the middle of the birthplace of modern man.

Where are we now?

And where are we going?

Right now we are going steadily forward, and we have achieved goals long before their deadlines.

We are mostly done with our website, and we have finished the white paper. We have finished the most basic planning, we are focusing on getting new recruits right now.

We hope that we can recruit 100 people or more before December, and also getting some on the sideline that will join after we have settled.

There has been a ton of interest, we have received 50+ possible recruits in a week!

Basic Planning

The next pages from here is all about the basic planning, like how we get there and what we need to bring with us.

Expect that we are not finished with all the in deep planning, and this is just the most basic stuff.

Government and organization

I will lead this mission until we have arrived at our destination.

The New Rhodesian government will be chosen by voting.

We will chose the government when we have settled, therefore it is something we don't really need to think of right now.

It will not be an ANCAP paradise, because we need to work together to achieve our goals and not every man for himself.

We will also ban following ideologies/Ideas

*Marxism/Communism

*Cultural Marxism

We also don't need any of these people in New Rhodesia

*Transgenders

*Homosexuals

*Pessimists

*People who have committed murder or rape

Transport

(For the first scouts)

Our area is laying in north eastern DRC, and there will be only a few dirt roads because of poor infrastructure.

First everybody will individually travel to Kisangani with plane, and then we will meet each other there.

There is 400 km from Kisangani to our area, there is dirt roads on 300 of those kilometers but the last 100 km is on foot through difficult terrain.

We can rent a (taxi) rather cheap or we can rent a more expensive 4x4 with driver, and then getting there more safely.

The scouts will then make a simple landing strip.

(For citizens that will come in the second wave)

All new citizens will travel on their own to Kisangani, and then we would try to strike a deal with an Ugandan based private airline that can transport you to our area.

You will need to pay for all transport costs yourself, and it will not be cheap. Expect 4000 usd or more just in travel expenses, and that will maybe just barely cover it.

Logistics

We need a lot of equipment to realize our dream, and the transport of the equipment is maybe that hardest part of this cause.

What you need too bring with you.

Heavy equipment:

- Backpack at least 70 liter
- Hammock with mosquito net or a tent
- Small summer sleeping bag

Clothing:

- Light water resistant jacket
- Waterproof military boots
- Lightweight poncho
- Extra socks
- Extra underwear

Equipment:

- Swiss-knife
- Torch and spare batteries
- Little solar-panel
- Fishing rod and some hooks
- 2 firesteel
- 100 tablets of malarone malaria pills
- Insect repellent
- Little first help kit
- At least 5000 USD

List of heavy and shared equipment we need

- Chainsaws
- Solar-panels
- Hammers
- Nails
- Folding shovel
- Nylon rope
- Seeds from different crops
- Garmin GPS
- Long range radios

This is just a simple list, it should only be used as a guide line.
We need a lot more equipment than just this, we will update the list frequently.

Security

Firearms

We will acquire firearms, and we have contact info on some Ugandan based weapon manufacturers. The firearms are mostly refurbished Soviet weapons, and they are very cheap but still working without problems.

Natives

We have chosen an area that are very remote, and there is no big settlements nearby. We will send out people that can negotiate with the natives, and we will make sure to have a healthy relationship with any natives nearby our area.

But we will not tolerate any trespassing on our area by natives, and we will protect our lands with all necessarily force.

Warlords

There is different paramilitary groups in north eastern DRC, and there is a little chance that we can become a target.

Our militia will have patrols 24/7, and they will keep a close watch on our borders.

We will not become a easy target, and they will properly prefer some unprotected little village instead of attacking a well armed village.

The Kinshasa government

We will have diplomatic relations to the Kinshasa government when we have grown in size, and we will make sure that the government are not seeing us as a threat.

The officials outside of Kinshasa is very corrupt, and bribery is very common in DRC.

United Nations

We will treat the natives of DRC with respect, as long they do the same against us. We will not violate the Geneva convention, and we will only use force if we need to defend ourselves.

China

The Chinese is very interested in rare earth minerals like cobalt, and there may be a conflict of interest at a point.

We will try to prevent this, and we will cooperate with the Chinese government if necessary.

The Rhodesian militia

A well trained militia will be necessary to protect our borders from intruders. The 5 years of mandatory military service will make sure that we will have men that can protect our borders.

Different vets have contacted us, a lot of them have many years of military experience.

These men will train the militia, and be the spine of the army.

We will have a supply of weapons and ammunition as described before, the weapons are old cheap refurbished Soviet firearms like ak47 or RPK so nothing special.

We have an upcoming citizen that have a diploma in repairing firearms.

In case of war then all citizens will be armed, we are expecting every man, woman to fight for New Rhodesia if necessarily.

Agriculture

The soil in the area is very good, and can be improved if we use the right methods in farming. We need to make sure that we are not gonna flush out all the nutrients out of the soil, the soil need to there

The weather is tropical, and therefore some crops cannot be grown there.

List of crops we can grow

-Yam

Are almost just the same as sweet potatoes.

-Sweet potatoes

Very fast growing crops, that can give amazing yields.

-Bananas

Good reliable source of food, and will give new fruits every year.

-Coconuts

Resistant crop that can grow almost anywhere, will give pure water and food.

-Papaya

Fast growing shade tree, with fruits that taste sweet and very good.

-Cocoa

Is a good revenue maker, but is slow growing.

-Tobacco

Also a good revenue maker.

-Maize

Very good crop, than can produce a lot of food that can be stored for later use.

-Chickpea

Can be harvested in 100 days, and is growing very fast.

-Cowpea

Can be harvested in 60-90 days, and the seeds can be stored for a long time.

Raised beds can easily be made to maximize our harvest on small scale, and can be easily made by even armatures.

A good technique we will use is rotating crops, and that would prevent nutrients flushing.

We will give out 5 acres of free land to every new citizen, and we will encourage them to farm the land.

Farming

We also need a substantial flow of meat, that can make sure we are feed and we can trade with the neighboring cities. The land is very good for herding cattle, and we will have large areas where the cattle could live.

The livestock can be bought from nearby villages, that cost of livestock in DRC is very small. There is a river that can be used as highway to transport the livestock, this will be a huge advantage.

We can use the excrement's from livestock as fertilizers, that will improve the quality of the soil.

The area

The area is located in north eastern DRC, and is very remote with no big settlements in a radius of 40 kilometers.

We will write more about terrain and climate in the next two pages, and we will try to explain why we chose this area.

We cannot give out the exact location of the area because it would compromise or cause, and would not benefit us in any way.

There is no law enforcement in almost a 400 km radius.
So we will claim the land, and then try to strike a deal with the Kinshasa government.

We are ready to fight for our rights if the Kinshasa government decline our offer.

The climate

The climate in the New Rhodesia is going to be tropic, and therefore very humid and warm.

These two diagrams are also giving a good overlook, how the weather in New Rhodesia would be like.

Temperature in fahrenheit and celcius for every month.

Gemena	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
Min (°C)	19	20	20	21	21	20	20	20	20	20	19	19
Max (°C)	31	33	32	31	31	30	29	29	30	30	30	31
Min (°F)	66	68	68	70	70	68	68	68	68	68	66	66
Max (°F)	88	91	90	88	88	86	84	84	86	86	86	88

Rain in mm and inches for every month.

Gemena	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	Year
Prec. (mm)	35	55	125	145	165	155	180	215	195	215	120	45	1650
Prec.(in)	1.4	2.2	4.9	5.7	6.5	6.1	7.1	8.5	7.7	8.5	4.7	1.8	65
Days	4	6	11	12	14	12	12	15	16	17	11	6	136

As you can see we will have many days with heavy raining, and we would need to make sure that we eliminate the issue of erosion.

That can be dealt with by proper draining of our living quarters by digging ditches, and using pipes that can lead the water out in the river.

The terrain

The terrain is mostly made of grassy hills, and with small islands of jungle vegetation.

There is also rivers going through the area, and we will use the rivers for easy transportation of heavy equipment.

Well known resources in the area is

- Timber
- Clay
- Water
- Farmland
- Gold

We cannot say 100% how the area would look like, don't expect this information to be perfectly matched with reality when we arrive.

Health

New Rhodesia is not gonna be a place for the weak, and you should not be on any medication if you are interested in joining.

Malaria

Malaria is gonna be an issue no matter what.
We can try to prevent it by taking malarone pills, and using malaria nets.

Yellow fever

Is very common, but can easily be overcome with a vaccine.

Typhoid fever

Is common in populated areas of DRC, can be prevented by eating only processed food and only drinking purified water.

Vaccinations

This is a list of vaccinations necessarily for travel in DRC

Vaccinations against following diseases

- Yellow fever
- Typhoid
- Cholera
- Rabies

They may be expensive for some, but they are worth it in the end.

Housing and infrastructure

Housing in the beginning would be simple, and mostly made out of primitive log shelters or hammocks.

Don't expect any luxury in the first 5 years, this is not something that will happen overnight.

Housing

Small cabins can be made out of logs, and we can insulate the cabin with clay from the nearby river.

The hardest part is making a good foundation, and our best idea yet is to use sand from the river for fast.

Roads and basic infrastructure

Its very rainy in the area, erosion will be a challenge of that reason. We will battle erosion by digging drains in the sides of the roads, the roads will be of gravel with rocks on the sides preventing the road from being washed away.

Sandbags can also stop erosion, it can also prevent flooding. Sand is a resource that we don't need to worry about, there is plenty of it in the area.

Diplomacy

Diplomacy is something we need to manage properly, and the future of New Rhodesia is depending on it.

We will need to have connections with to neighboring cities, then we can trade and New Rhodesia will prosper when trading is making us an income.

The Kinshasa government will not like that some Caucasian men are trying to inhabit some of their land, so we need to be ready to pay officials off with bribes if they tries to blackmail us.

The population in DRC is tired of civil war, some of them even miss dearly the old colonial times when there was peace and prosperity.

We can use this to our advantage.

Recruiting

New Rhodesia would die fast without new recruits.
Therefore we need to make sure that we can attract recruits into our cause.

Ways recruiting can work

- Good old school memes
 - Websites with propaganda videos
 - Social Media
 - Reaching out for desperate Afrikaners in South Africa or Zimbabwe.
-

We will make a wickr server that will only work with making propaganda 24/7, there we will unite the forces that are willing to help New Rhodesia into a reality but cannot go with us of some reason.

The first tasks of the propaganda-server will be as following

- Create a Facebook account and a twitter account.
- Create videos showing how western civilization can be saved.
- Create memes to catch the youth, because the youth is the future of our nation.
- Show the world what our mission is.

The dream

New Rhodesia is our forefathers dream about a state that cannot be corrupted.
A dream about a future where true diversity is enforced, not the lying and destroying multicultural society that EU is forcing our homeland to accept.

We are not running from the problems in the western civilization, we are just trying to keep the rot away from us.

We will make the foundation for a society that can change the course of history.
A society that will burn down the corrupt and lying politicians.

Write us an email if you want to join the cause!!
Check the website for our email address.
